

## Skill

- **Languages:** JavaScript (ES6+), TypeScript, Python, C++, Java.
- **Frontend:** React.js, Tailwind CSS, Redux, Responsive Design.
- **Backend:** Node.js, Express, PHP, REST APIs.
- **Cloud & Tools:** AWS (Lambda, S3, DynamoDB), Firebase, Git, Stripe API, Docker.
- **AI Integrations:** OpenAI API, Google Gemini, Canvas API.

## Experience

### Software developer & Lead developer | Nubevest | Office | Melbourne, AU |

May 25 - Current

- **AI-powered chat platform** built with React and Node.js, integrating the Gemini API for real-time natural language processing. Features secure authentication, image generation, multi-format document processing (**up to 25MB**), and **real-time data syncing across devices**. Engineered to handle **1,000 concurrent users** with **low-latency** responses, ensuring a seamless experience under high load.
- Led the technical delivery of **10+ production websites**, enforcing strict quality standards and moving the team from manual deployments to CI/CD workflows.
- Designed scalable backend services using **Firebase and AWS Lambda**, ensuring 99.9% API reliability during peak traffic.

### Full-stack developer/Contract | VectorsLab| Hybrid| Melbourne, AU |

Sep 24 - Jan 26

- Architected and launched an **80+ page enterprise web platform (Citywide Melbourne Appliance Repairs)** using React and Tailwind CSS, modularizing components to ensure 100% code reusability across views.
- Built a custom **AI Image SEO automation tool** (internal tool) using **Google Gemini AI** and TypeScript; reduced manual metadata entry by **90%** by automating EXIF/IPTC tagging. Optimized image processing workflows using **Google's Nano Banana**, enabling high-performance client-side batch conversions (HEIC to JPG) and zip exports.
- Integrated **Stripe** to handle secure payment processing for a **custom eCommerce platform(Securewrap)**, supporting concurrent user transactions with zero downtime.

### Web Developer | TechIT | Remote | Melbourne, AU |

Mar 24 - Aug 24

- Migrated and maintained full-stack web applications using **Python and Node.js**, integrating **AWS DynamoDB** for scalable noSQL data storage.
- Implemented serverless backend logic using **Firebase Functions**, reducing server costs by moving away from traditional EC2 instances.

## Project Based Experience

### ShirtGPT – SAAS Project Startup | React, Node.js, OpenAI API, Stripe

Jan 24 - Jul 24

- Developed a "text-to-merchandise" platform integrating **DALL-E** for image generation and **Stripe** for payments, simulating a real-world SaaS architecture.
- Engineered a custom fulfillment logic to bypass Shopify dependencies, reducing operational overhead.

### Ezbill Vision– Group Project (Dart, Node.js, Python, Firebase services)

Mar 23 - Jun 23

- Built an Android application for shared household bill management, integrating **IoT sensors** for real-time usage tracking.
- Implemented complex group logic and real-time notifications using **Firebase Cloud Messaging**.

## Education

### Master of Computer Science | University of Adelaide

Mar 21 - Nov 23

### Bachelor of Information Technology (Major Software Development) | Charles Sturt University

Mar 18 - Jul 20

## Awards & Community

### Competitive Programming (ICPC & UniHack) | Team Lead / Participant

- Competed in the **ICPC Regional Contests** (ANZAC League), collaborating with a 3-person team to solve complex algorithmic constraints under strict time limits.
- Regular participant in **UniHack** and **hackathons**, focusing on graph algorithms and dynamic programming solutions.
